## Skills

**Visual Design & Branding**  
Creating Brand Assets like icons or illustrations that accommodate the product strategy and spark joy. Also writing guidelines on how to build and use them.

**Interface Design**  
Building, implementing and maintaining design systems and document complex design components and modules for responsive web and native applications.

**Motion Design**  
Creation of animations to bring static user interfaces to life, make mental models clear and understandable and increase joy of experience.

**Design Thinking**  
Use proven research and design thinking methods to develop new products and optimize user experience.

**Testing & Iterating**  
Prepare interview guides, build prototypes to conduct bias-free testings. Evaluation of the results.

**Team-Collaborating**  
Taking responsibility for the quality of the product through close coordination with all stakeholders.

**Prototyping**  
Creating Prototypes with Figma, Principle and After Effects for Proof of Concept or User Testings.

**Developer Handoff**  
Handover of designs and communication of all technical requirements. Estimation and consultation with the developers.

**Frontend-Development**  
Good knowledge of HTML/ CSS and basic knowledge of JavaScript, which has always been useful when working with developers.
